**INTRODUCTION: A CLIENT SERVER NETWORK**

In a business environment, you would expect to find a “Client Server Network” where the users’ computers (the clients) are connected to a server (or servers) in order to allow for file sharing, sharing of resources (such as printers), email, and centralized management and security. The client machines need a client operating system (such as Microsoft® Windows 10), and then any required client applications (such as Microsoft® Outlook®). Similarly, each server needs a server operating system (Windows Server®) and then any required server applications (such as Microsoft® SQL Server®).

This reference card is not a complete list of all the Microsoft technologies, but just the more common ones, and unless otherwise stated, you can assume that each license is a separate purchase. More detailed licensing information is available in other reference documents in this series.

**CLIENT OPERATING SYSTEMS**

Windows 10 is the latest version of Microsoft’s client operating system, replacing Windows 8.1 and Windows 7.

There are several editions of Windows 10. Businesses would normally use either Windows 10 Pro or Windows 10 Enterprise.

Windows 10 is licensed by device. This means that a license must be acquired for each device on or from which the software is used or accessed (locally or remotely over a network).

**CLIENT APPLICATIONS**

The most common client applications used in a business (such as Microsoft® Word and Outlook) are most likely to be licensed as a Microsoft Office suite rather than as individual applications. Several different Microsoft Office 2016 suites are available (containing different individual Office applications) but Office 2016 Professional Plus and Office 2016 Standard are the editions most likely to be found in a business environment since they are the only suites available through a Volume Licensing agreement.

Office 2016 is licensed by device. This means that a license must be acquired for each device on or from which the software is used or accessed (locally or remotely over a network).

**SERVER OPERATING SYSTEM**

All server machines must have a server operating system installed on them. The latest version of Microsoft’s server operating system is Windows Server 2016. There are 3 editions of Windows Server, for different organizational requirements.

Windows Server 2016 Standard and Windows Server 2016 Datacenter are licensed through the Per Core and CAL licensing model (see right).

**Per Core and CAL Licensing**

Purchase Core licenses for each physical core in the server with a minimum of 8 Core licenses per processor and 16 Core licenses per server, and then purchase Windows Server 2016 Client Access Licenses (CALs) for either users or devices. A Client Access License (CAL) allows the client to access the services of the server.

**Licensing Virtualized Server Solutions**

IT professionals often like to virtualize server solutions to ease management and to reduce hardware costs. Windows Server 2016 Standard and Windows Server 2016 Datacenter include Hyper-V to allow server virtualization. Be aware that virtualizing is not a way of reducing licenses purchased, and different versions and different editions of different products may have different virtualization rights. For example:

- **When licensing a server completely with Windows Server 2016 Standard Core licenses, 2 virtual machines are allowed**.
- **When licensing a server completely with Windows Server 2016 Datacenter Core licenses, unlimited virtual machines are allowed**.

Introduction to Microsoft Products and Product Licensing - continued

**SERVER APPLICATIONS**

**MICROSOFT® EXCHANGE SERVER 2016**

Providing a variety of ways for user mailbox access:

Exchange Server 2016 is licensed through the Server and CAL licensing model (see right). Standard and Enterprise CALs are available depending on the functionality required by the users.

**MICROSOFT SHAREPOINT SERVER 2016**

SharePoint® Server 2016 facilitates business collaboration by providing an enterprise portal (or intranet) with the ability to search, manage content and processes, and deliver solutions involving business forms and reports.

SharePoint Server 2016 is licensed through the Server and CAL licensing model (see above right). Standard and Enterprise CALs are available depending on the functionality required by the users.

**MICROSOFT SKYPE FOR BUSINESS SERVER 2015**

In conjunction with the client application Microsoft Skype for Business, Skype for Business Server provides: secure instant messaging; integrated presence; audio, video and web conferencing; and enterprise voice capabilities.

Skype for Business Server 2015 is licensed through the Server and CAL licensing model (see above right). Standard, Enterprise and Plus CALs are available depending on the functionality required by the users.

**MICROSOFT SQL SERVER 2016**

SQL Server 2016 is a relational database including services such as Microsoft® SQL Server® Analysis Services for analysis and Microsoft® SQL Server® Reporting Services for reporting.

SQL Server is at the heart of Microsoft’s Business Intelligence solution and is required in solutions containing Microsoft SharePoint Server, Microsoft Skype for Business Server and the Microsoft System Center products.

Some editions of SQL Server 2016 are licensed through the Server and CAL licensing model (see above right) and some editions are licensed through a model which counts processor cores.

**Server and CAL Licensing**

Purchase a Server license for each server, and then purchase Client Access Licenses (CALs) for either users or devices:

- **A Device CAL is assigned to the device and allows multiple users to use that device**
- **A User CAL is assigned to the user and allows that user to use multiple devices**

**Standard and Enterprise CALs**

Some server applications offer different levels of functionality, and there are corresponding CALs.

The core functionality (depicted by the blue shading) is linked to a Standard CAL (depicted by the blue license) assigned to a user or device.

If the extended functionality (depicted by the red shading) is utilized, then the purchase of an Enterprise CAL is required (depicted by the red license) in addition to the Standard CAL.

Note that Skype for Business Server 2015 also has a Plus CAL available which must be purchased in addition to the Standard CAL.

**Licensing Online Services**

Rather than the services being installed on the organization’s own servers (known as “on-premises”), Microsoft Online Services are installed on Microsoft’s servers which users access across the Internet. Examples include Exchange Online, Skype for Business Online and SharePoint Online.

A User Subscription License (USL) is required for each user to access the services of an Online Service.

**MICROSOFT SYSTEM CENTER 2016**

Microsoft® System Center is a comprehensive management platform that enables IT Professionals to more easily and efficiently manage IT environments, including the server infrastructure and client devices.

**MICROSOFT AZURE**

Azure is Microsoft’s cloud computing platform which consists of a growing collection of integrated services. For example, these services allow customers to:

- Host Virtual Machines
- Use Storage, Backup and Recovery facilities
- Develop and deploy Web and Mobile Apps
- Use Data Analytics for analyzing Big Data

Most of the Azure Services are licensed and purchased on a consumption basis.
